

A Presentation

Matthew J. Gidden

2015-03-26

Introduction

Overview

Another slide

This presentation provides an illustration of some of the capabilities of the **Beamer** export in org mode:

1. simple slides (this one),
2. slides with special blocks,
3. multi-column slides and
4. the use of **Babel** for literate programming.

This file should be exported using `M-x org-export-dispatch` specifying 1 for \LaTeX and then P, for instance, to generate the PDF.

Just a test
